

Port Forwarding

Steps to set up port forwarding to a Genius Hub:

1. Find the IP address of the Genius Hub on your network

- Make a note of the UID of your Genius Hub (printed in blue text on the back of the Hub)
- Log in to your broadband router
- Find the section that lists 'Connected devices'
- Find the entry for your Genius Hub. Entries should show a 'MAC address' - the Genius Hub ID will match the last part of the MAC address

2. Set up the port forwarding

- Log in to your broadband router
- Find the area that allows you to set up port forwarding
 - This may also be listed as 'Port Redirection', 'Services', or similar
- Set the following parameters (you may need to select 'Add new entry' or similar)
 - Public port: 1222
 - Private Port: 1222
 - Protocol: TCP or Both
 - Source IP: Any (not required)
 - Private IP: *enter the IP address found in step 1*

(please note that the settings page on your router will not look exactly the same as this, the example below is purely illustrative)

<input type="checkbox"/> Enable	
Mode	Single ▼
Service Name	Genius Hub
Protocol	TCP ▼
WAN Interface	ALL ▼
Public Port	1222
Source IP	Any ▼ IP Object
Private IP	A.B.C.D
Private Port	1222

- Save your changes
