Port Forwarding

Steps to set up port forwarding to a Genius Hub:

1. Find the IP address of the Genius Hub on your network

- a. Make a note of the UID of your Genius Hub (printed in blue text on the back of the Hub)
- b. Log in to your broadband router
- c. Find the section that lists 'Connected devices'
- d. Find the entry for your Genius Hub. Entries should show a 'MAC address' the Genius Hub ID will match the last part of the MAC address

2. Set up the port forwarding

- a. Log in to your broadband router
- b. Find the area that allows you to set up port forwarding
 - i. This may also be listed as 'Port Redirection', 'Services', or similar
- c. Set the following parameters (you may need to select 'Add new entry' or similar)
 - i. Public port: 1222
 - ii. Private Port: 1222
 - iii. Protocol: TCP or Both
 - iv. Source IP: Any (not required)
 - v. Private IP: enter the IP address found in step 1

(please note that the settings page on your router will not look exactly the same as this, the example below is purely illustrative)

Enable	
Mode	Single V
Service Name	Genius Hub
Protocol	TCP V
WAN Interface	ALL 🗸
Public Port	1222
Source IP	Any ∨ IP Object
Private IP	A.B.C.D
Private Port	1222

d. Save your changes
