Creating a new zone

The following explains how to create a new zone on the app, and assign a device to the zone.

To create a zone, 2 pieces of information are required:

* The name of the zone. This will appear on the My House page of the app

* The type of the zone. This determines what options will be available and how the zone will control the devices. An explanation of each is shown when the zone type is selected.

See Chapter 14 of the Manual for more information on the individual zone types.

See the 'Create new zone' section under Chapter 14 of the Manual for guidance on how to create a new zone.

To ensure check the device has been correctly assigned open the zone's page, tap "Zone Setup" under the menu and check the channel is listed under "Zone Devices".
